Project Title:

Mario-Inspired SDL Game

Arin (B24PH1004):

1. Designed and implemented the core game mechanics including character movement, collision detection, and enemy behavior.
2. Developed the main C source code integrating all functional modules.
3. Fixed GUI rendering issues and implemented background audio using SDL_Audio.

Rahul (B24PH1020):

1. Implemented the score handling system including logic for real-time score updates.
2. Integrated file I/O to store and retrieve top scores.

Chetan (B24PH1008):

1. Designed and implemented the SDL-based graphical user interface.
2. Handled the rendering of game objects such as player, enemies, coins, and background.

Pankaj (B24CI1041):

1. Assisted in implementing the audio system using SDL.

2. Supported debugging and optimization of sound playback and looping.

Vikas (B24MT1046):

1. Conducted complete debugging of the entire project to ensure functionality.
2. Resolved runtime and logical errors across different modules.
